#### **About IRENA**

The International Renewable Energy Agency (IRENA) is an intergovernmental organisation that supports countries in their transition to a sustainable energy future, and serves as the principal platform for international co-operation, a centre of excellence, and a repository of policy, technology, resource and financial knowledge on renewable energy. IRENA promotes the widespread adoption and sustainable use of all forms of renewable energy, including bioenergy, geothermal, hydropower, ocean, solar and wind energy, in the pursuit of sustainable development, energy access, energy security and low-carbon economic growth and prosperity. www.irena.org

Prepared by: Adrian Whiteman, Sonia Rueda, Dennis Akande, Nazik Elhassan, Gerardo Escamilla and Iana Arkhipova. The authors also gratefully acknowledge the contribution to this dataset from national statistical focal points in countries.

For further information or to provide feedback, please contact the IRENA Statistics team (statistics@irena.org).

This report is available at: www.irena.org/Publications. Data can be downloaded from: https://www.irena.org/Statistics/Download-Data.

#### **FORFWORD**

Renewable energy sources have continued to dominate new additions to the world's power generation mix over the past year. Renewable capacity reached 2 537 gigawatts (GW) globally by the end of 2019, up 176 GW from the previous year.

Asia once again achieved over half of new installations despite a slightly slower pace. Europe and North America, meanwhile, saw an upturn in their capacity expansion. Wind and solar power accounted for 90% of the world's newly added renewable capacity. In part, this very high share reflects low hydropower growth as several large projects missed expected completion deadlines. But even then, renewables represented 72% of total capacity additions in 2019, continuing to outpace fossil fuels by a wide margin.

This latest edition of *Renewable Capacity Statistics* comes amid a global health crisis that affects practically every sphere of life. As an existential threat, the multi-faceted fallout from coronavirus (COVID-19) now sits alongside climate change as a defining challenge of our time.

In responding to today's crisis, governments may be tempted to focus on short-term solutions. Yet distinctions between short-, medium- and long-term challenges may be deceptive. Economic stimulus measures must also embrace sustainability and climate goals.

I hope this annual statistics book helps countries and communities to reinforce their commitment to renewables, make informed energy decisions, and do the necessary work to ensure a sustainable, stable, healthy future.

Francesco La Camera

Director-General
International Renewable Energy Agency

### **AVANT-PROPOS**

Les sources d'énergie renouvelables ont continué de dominer les nouveaux ajouts au bouquet de production d'électricité dans le monde au cours de la dernière année. La capacité d'énergies renouvelables installée a atteint 2 537 gigawatts (GW) dans le monde à la fin de 2019, en hausse de 176 GW par rapport à l'année précédente.

L'Asie a de nouveau réalisé plus de la moitié des nouvelles installations, malgré un rythme légèrement plus lent. L'Europe et l'Amérique du Nord ont, quant à elles, connu une reprise de leur expansion de capacité. Les énergies éolienne et solaire représentaient 90% de la nouvelle capacité d'énergies renouvelables installée mondialement. Cette part très élevée reflète en partie la faible croissance de l'hydroélectricité qui est dû aux retards pris par plusieurs grands projets. Cependant, les énergies renouvelables représentaient 72% des ajouts de capacité totaux en 2019, continuant à dépasser largement les combustibles fossiles.

Cette dernière édition de « Statistiques de Capacité Renouvelable » survient au milieu d'une crise sanitaire mondiale qui touche pratiquement tous les domaines. En tant que menace existentielle, les retombées variées du coronavirus (COVID-19) se situent désormais au même rang que les changements climatiques, comme un défi déterminant de notre époque.

En répondant à la crise actuelle, les gouvernements peuvent être tentés de se concentrer sur des solutions à court terme. Pourtant, les distinctions entre les défis à court, moyen et long terme peuvent être trompeuses. Les mesures de relance économique doivent également englober les objectifs portant sur durabilité et le climat.

J'espère que ce rapport de statistiques annuel aidera les pays et les communautés à renforcer leur engagement envers les énergies renouvelables, à prendre des décisions énergétiques avisées, ainsi qu'à faire le travail nécessaire pour assurer un avenir durable, stable et sain.

Francesco La Camera

Directeur général Agence internationale pour les énergies renouvelables

#### **PRFFACIO**

Las fuentes de energía renovable siguieron dominando las nuevas incorporaciones a la matriz mundial de generación de energía eléctrica durante el año pasado. La capacidad renovable alcanzó los 2 537 gigavatios (GW) a nivel mundial a finales de 2019, registrando un aumento de 176 GW respecto al año anterior.

Asia, una vez más, logró más de la mitad de las nuevas instalaciones a pesar de un ritmo ligeramente más lento. Mientras tanto, Europa y Norteamérica realzaron su expansión de capacidad. Las energías eólica y solar representaron el 90% de la capacidad renovable recientemente adicionada en el mundo. En parte, esta participación alta refleja un bajo crecimiento de la energía hidroeléctrica, ya que varios proyectos importantes no cumplieron con los plazos de finalización previstos. Aún así, las energías renovables representaron el 72% de las adiciones de capacidad total en 2019, superando una vez más a los combustibles fósiles por un amplio margen.

Esta última edición de Estadísticas de Capacidad Renovable se produce en medio de una crisis de salud global que afecta prácticamente a todos los ámbitos de la vida. Como una amenaza existencial, las consecuencias multifacéticas del coronavirus (COVID-19) se posicionan ahora junto al cambio climático como un desafío decisivo de nuestro tiempo.

Al responder a la crisis de hoy, los gobiernos pueden verse tentados a centrarse en soluciones a corto plazo. Sin embargo, las distinciones entre los desafíos a corto, mediano y largo plazo pueden ser engañosas. Las medidas de estímulo económico también deben abarcar objetivos de sostenibilidad y clima.

Espero que este libro anual de estadísticas ayude a los países y comunidades a reforzar su compromiso con las energías renovables, tomar decisiones informadas sobre energía y hacer el trabajo necesario para garantizar un futuro sostenible, estable y saludable.

Francesco La Camera

Director General Agencia Internacional de Energías Renovables

#### NOTES TO THE TABLES

The renewable power capacity data shown in these tables represents the maximum net generating capacity of power plants and other installations that use renewable energy sources to produce electricity. For most countries and technologies, the data reflects the capacity installed and connected at the end of the calendar year. The data is presented in megawatts (MW) rounded to the nearest one megawatt, with figures between zero and 0.5MW shown as a 0.

Data has been obtained from a variety of sources, including: the IRENA questionnaire; official statistics; industry association reports; and other reports and news articles. Numbers followed by the letter "o" are figures that have been obtained from official sources such as national statistical offices, government departments, regulators and power companies. The letter "u" follows figures that have been obtained from unofficial sources, such as industry associations and news articles. The letter "e" follows figures that have been estimated by IRENA from a variety of different data sources. All data from the IRENA questionnaire is presented without any indicator.

Data are available for download at www.irena.org/resource.

#### NOTES À PROPOS DES TABLEAUX

Les données sur les capacités électriques renouvelables présentées dans ces tableaux représentent la capacité maximale nette de génération des centrales électriques et autres installations utilisant des sources d'énergie renouvelables pour produire de l'électricité. Pour la plupart des pays et technologies, les données reflètent la capacité installée et connectée à la fin de l'année civile. Les données sont exprimées en mégawatts (MW) arrondies à l'unité la plus proche ; les valeurs inférieures à 0,5 MW apparaissent comme 0.

Les données viennent de nombreuses sources incluant : le questionnaire IRENA ; les statistiques officielles ; des rapports d'associations de l'industrie ; et d'autres rapports et articles de presse. Les valeurs suivies de la lettre "o" ont été obtenues à partir de sources officielles (par exemple instituts statistiques nationaux, agences gouvernementales, régulateurs, compagnies d'électricité). La lettre "u" suit les valeurs venant de sources non officielles comme des rapports d'associations de l'industrie ou des articles de journaux. La lettre "e" suit les valeurs qui ont été estimées par l'IRENA à partir de sources diverses. Toutes les données venant du questionnaire IRENA sont présentées sans indication.

Les données sont téléchargeables sur le site www.irena.org/resource.

#### NOTAS A LAS TABLAS

Los datos de capacidad de generación eléctrica con energías renovables que se muestran en estas tablas representan la capacidad máxima de generación neta de las centrales eléctricas y otras instalaciones que utilizan fuentes de energías renovables para producir electricidad. Para la mayoría de los países y las tecnologías, los datos reflejan la capacidad instalada y conectada al final del año natural. Los datos se presentan en megavatios (MW) redondeados al megavatio entero más cercano, con cifras entre cero y 0.5MW representadas como un 0.

Los datos se han obtenido a partir de una variedad de fuentes, incluyendo: el cuestionario de IRENA; estadísticas oficiales; informes de las asociaciones industriales; y otros informes y artículos de noticias. Los números acompañados de la letra ""o"" son cifras que se han obtenido a partir de fuentes oficiales, como oficinas nacionales de estadística, departamentos gubernamentales, reguladores y compañías eléctricas. La letra ""u"" acompaña a cifras que se han obtenido a partir de fuentes no oficiales, tales como asociaciones industriales y artículos de noticias. La letra ""e"" acompaña a números que han sido estimados por IRENA a partir de diversas fuentes de datos. Todos los datos provenientes del cuestionario de IRENA se presentan sin ningún indicador.

Los datos están disponibles para su descarga en www.irena.org/resource.
